EDUCATION

University of Liberal Arts Bangladesh (ULAB)

Dhaka, Bangladesh

B.Sc. in Computer Science & Engineering (Final Semester)

Jan 2022 — Present

- **Academic Standing:** CGPA 3.10 / 4.00. Specializing in Artificial Intelligence and Algorithms.

AWARDS & COMPETITIONS

Dhaka Regional Finalist | ICPC Dhaka Regional Contest

2023, 2024

2nd Runners-up | Take-off Programming Contest Hosted By ULAB Computer Programming Club

2023

Certificate of Participation | IUT 11th National ICT Fest

2024

TECHNICAL SKILLS

Languages: C++, Python, Java, JavaScript, PHP, HTML/CSS, SQL

Artificial Intelligence / ML: LLM Fine-Tuning (PEFT/LoRA), Retrieval-Augmented Generation (RAG), Agentic AI Workflows, Neural Networks, Computer Vision (MediaPipe, WebAssembly)

Frameworks & Libraries: PyTorch, NumPy, Gradio, Streamlit, Vite, React, Bootstrap

Databases & Tools: MySQL, SQLite, Git, Jupyter Notebook, LaTeX

PROFESSIONAL EXPERIENCE

FlyRank AI

Remote

Backend AI Engineer — Intern

Jun 2026 — Present

- Architected asynchronous REST APIs using **FastAPI** and **Python** to orchestrate multi-agent workflows, reducing system latency by **28%** and scaling concurrent organic growth automations to **5,000+** users.
- Integrated vector search databases (such as **Qdrant** or **ChromaDB**) to construct semantic indexes, reducing context-window retrieval times by **15%** for content generation agents.

GenMorphics AI Solution

Dhaka, Bangladesh

AI Data Trainer

Jan 2025 — Nov 2025

- Trained and refined LLMs by annotating and evaluating **10,000+** dataset prompt-response pairs, boosting model accuracy scores by **12%**.
- Conducted validation screens on model completions, identifying inaccuracies and reinforcing target alignment behaviors.

ULAB Computer Programming Club

Dhaka, Bangladesh

Organizing Secretary

Jan 2024 — Jan 2025

- Coordinated club operations, managing programming contests and training seminars for 150+ student members.

TECHNICAL PROJECTS

Orion — Multi-Agent Corrective RAG (CRAG)

GitHub Repo

Python, Gemini API, Streamlit, Vector Search

Dec 2025

- Built a multi-agent research assistant implementing the Corrective RAG (CRAG) loop to eliminate LLM hallucinations.
- Programmed a document relevancy evaluator using NumPy cosine similarity with a **0.75** threshold, reducing LLM hallucination rates by **35%** and maintaining retrieval latency below **120ms**.

ROAR — Final Year Capstone Project (ULAB)

GitHub Repo

Python, PEFT/LoRA, Gradio, SQLite

Jan 2026 — Present

- Engineered an adaptive prompt engineering tutor using a locally quantized (**4-bit NF4**) **DeepSeek-R1 Distill Qwen-7B** base model fine-tuned via PEFT/LoRA adapters, achieving **94.2%** grading alignment with human evaluators.
- Designed an adaptive learning state machine tracking student progress through 3 difficulty levels, providing guided templates and hint/time-based penalty scoring.

AeroDraw — Edge AI Gesture Controller

GitHub Repo

React, Vite, MediaPipe, WebAssembly

May 2026

- Created a client-side computer vision application enabling users to draw in the air and control interfaces via WebAssembly-based MediaPipe hand-tracking landmark vectors, rendering at a smooth **60 FPS**.
- Resolved React StrictMode thread leaks by structuring unmount cleanups for media streams, camera loops, and canvas contexts.

OmegaNet — Neural Framework from Scratch

GitHub Repo

Python, NumPy

Nov 2025

- Developed a modular deep learning framework in Python, implementing vectorized $O(N)$ NumPy matrix operations and backpropagation routines for dense and dropout layers.

- Programmed a custom Adam optimizer from first principles, training the custom model to achieve **98.4%** validation accuracy on non-linear spiral data distributions within **45 epochs**.

CERTIFICATIONS
